

Care4Dystonia, Inc.

HAVE YOU SEEN THESE PEOPLE ?

All of these people have **dystonia**, a movement disorder, causing involuntary muscle contractions that twists their bodies into abnormal, sometimes painful movements and postures. Dystonia can affect any part of the body - arms, legs, eyes, face, or vocal cords - but it does not affect the mind. It is more common than many conditions you've heard of like Parkinson's disease, Lou Gehrig's disease. But few doctors recognize it when those afflicted seek medical help. Researchers are working on improving treatments and finding a cure for **dystonia**.

The more than 350,000 people with dystonia in N.A. like the ones you see above need better diagnosis and treatment.

For more information on **dystonia** and how you can help **VISIT**
